El objetivo de la conferencia y posterior debate es presentar cómo está afectando el fenómeno ChatGPT y, por tanto, las aplicaciones de inteligencia artificial generativa en el ámbito educativo.

Muchos de los problemas y peligros que se detectan en el contexto educativo no surgen por la aparición de ChatGPT u otras aplicaciones similares. Ya existían, ya se han tratado desde muchas perspectivas y seguían sin solucionarse. No obstante, el potencial de estas tecnologías y el efecto de su penetración acelerada están magnificando más que nunca algunos de ellos.

Conocer el potencial y los límites de esta tecnología debe servir, ante la tentación de prohibir su uso en contextos educativos, para imponer el planteamiento de entender qué pueden aportar estas herramientas a los procesos de enseñanza/aprendizaje, como el análisis crítico, la comparativa de fuentes o la selección y formulación de las preguntas adecuadas.

El proceso de interacción con las herramientas tiene un valor educativo en sí mismo. La calidad de las preguntas (*prompts*) y el diálogo que se origina influye en la calidad del contenido generado. Esto debe dar pistas al profesorado: el proceso es tanto o más importante que el resultado final.
