There is a need for a daily use of a software development methodology as a professional software developer

Motivation

- To take advantage of the methodology
 - Having qualitative and quantitative data of current state
 - Improving productivity and result quality
 - Improving flexibility to change
 - Minimizing risks
- Tailored to lone development

Objectives and drawbacks

Build an *Agile Methodology*

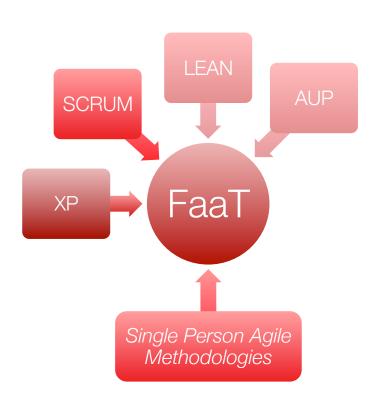

- Pragmatic, for daily use
- For a single developer
- Tested in real projects

Existing methodologies drawbacks

- They require the help of a mentor for implementation
- Focused in communication
- Tasks and roles are distributed among several people

FaaT – Components

Catalogue

- Strategic practices
- Workflow practices
- Auxiliary practices

For each practice

- Summary
- Description
- Guidelines
- Bad practices

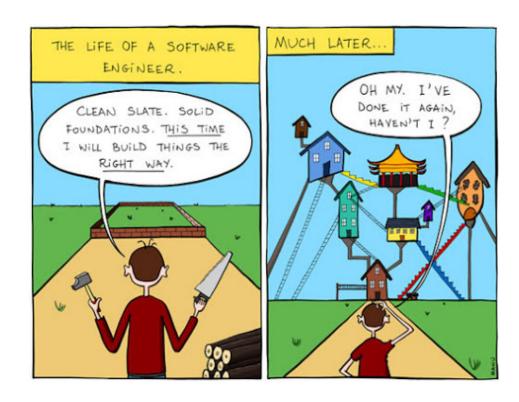

In practice

- Implantation process
- Tools to be used

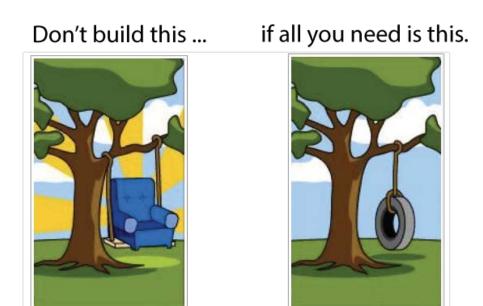

Guidelines to always choose an optimal decision

- Simplicity
- Embrace Change
- Make decisions

- Simplicity
- Embrace Change
- Make decisions

- Simplicity
- Embrace Change
- Make decisions

- Simplicity
- Embrace Change
- Make decisions

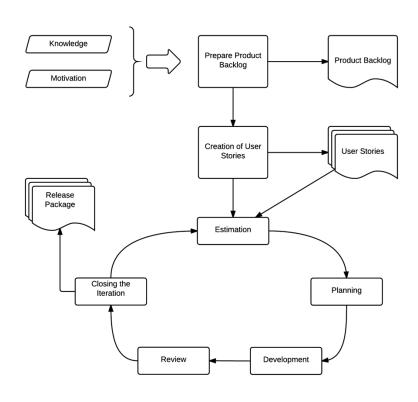

- Simplicity
- Embrace Change
- Make decisions

FaaT - Workflow Practices

Operational processes to be performed during product development

- User Stories
- Estimation
- Planning
- Product Backlog
- Automatic Tests
- Version Control System
- Re-evaluation

FaaT – Auxiliary practices

Other really useful practices

- Refactoring
- Limited Documentation
- Partial prototypes
- Rubber Duck
- Automation

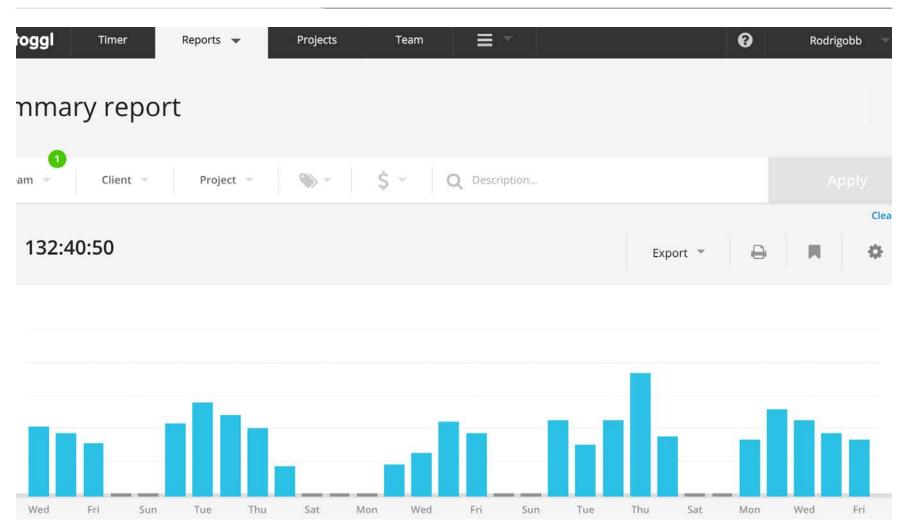

FaaT in practice

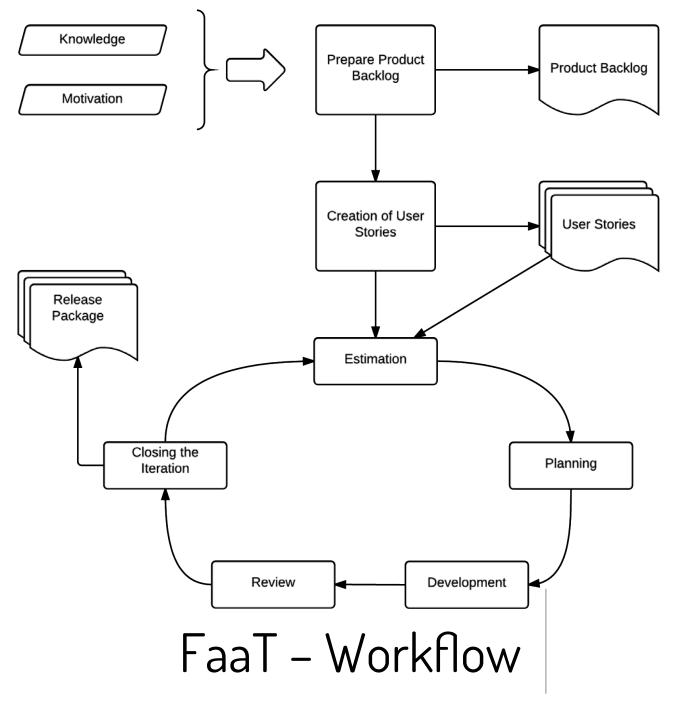

- Knowledge
- Motivation
- Implantation
- Evaluation

- Current Processes
- Tools
- People: developer and client

FaaT – Measure everything

rupivieuros report

Score

This score is not absolute. This chart is a comparison of your project relative to a representative average of recent PHP projects.

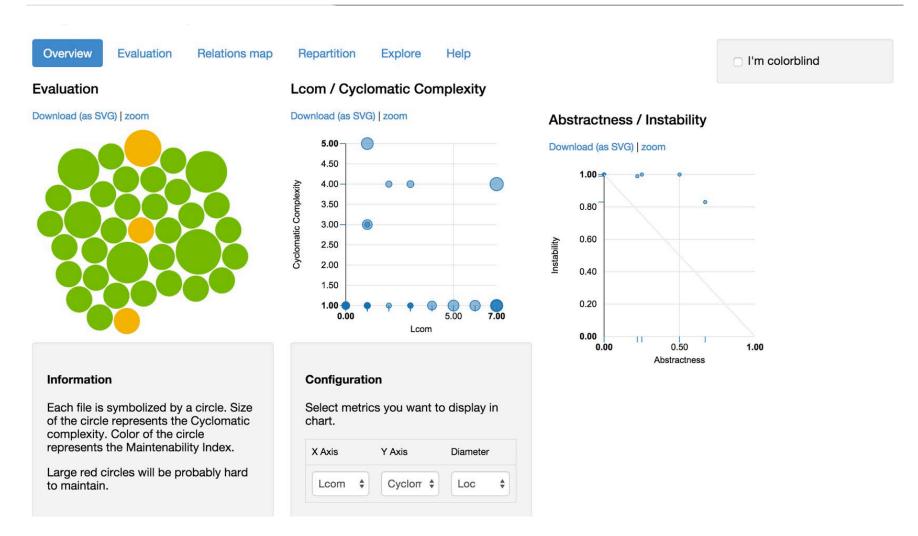

Each score is calculated from various criterias from 36 files in your projects. Your score is a note between 0 (poor) and 100 (excellent).

Factor	Score
Maintenability	85.98 / 100
Accessibility for new developers	87.9 / 100
Simplicity of algorithms	93.29 / 100
Volume	80.61 / 100
Reducing bug's probability	88.52 / 100

This score does not replace the judgment of an human.

FaaT – Qualitative Evaluation

Lines of code o

Estimated errors in implementation 6

FaaT - Qualitative Evaluation

FaaT – Closing the iteration

- Deliver a new release
 - Tagged in VCS
 - Deployment (automation)
- Methodology review
- New iteration start (from Estimation phase)

- Analyze gathered and generated information
- Evaluate improvements in
 - Software development process
 - Software quality based on
 - Clients and users feedback
 - Benefits for the developer
 - Developer productivity

- Include new tools or automations
 - VCS branches logic
 - Documentation generators
 - Continuous deploy/integration

Conclusions

- It has been developed an agile methodology for software development alone
- Improved the quality of products delivered to the customer, lowering risks and increasing performance.
- Renounces to purisms to gain flexibility and applicability
- It can be applied without outside mentoring, with little interference in the freelance daily routine.
- It has been tested successfully on real projects for eLearning via web

Future improvement lines

- Keep testing and evolving FaaT
- Better communication with client
- Improve Risk Management
- Multiple Project Management

Thank you
